PROFESSIONAL SUMMARY

LLM/GenAI Engineer with hands-on production experience designing and deploying multi-agent systems, RAG pipelines, and fine-tuned language models. Specializes in agentic orchestration (LangGraph, CrewAI), model fine-tuning (Qwen, Mistral), and full-stack LLM deployment (FastAPI, Docker, AWS EC2).

EDUCATION

Stony Brook University

Masters in Data Science.

Stony Brook, New York

Expected May 2028

Jain University, School of Engineering and Technology

Bachelor of Technology in Computer Science (AI & ML). GPA: 8.0.

Bengaluru

May 2025

EXPERIENCE

AI/ML Developer

TechAhead

August 2025 – January 2026

Noida

- Architected multi-agent workflows using CrewAI, LangGraph, and Redis, improving event scheduling efficiency by 40%.
- Deployed three Dockerized FastAPI microservices on AWS EC2, load-tested to 100,000 concurrent users: a video annotation service, an embedding generation and Qdrant storage service, and a main chatbot service, all orchestrated under Nginx, Systemd, and CloudWatch.
- Built healthcare and fitness agentic systems using Amazon Strands and the OpenAI Agents SDK.

AI Engineer Intern

TechAhead

July 2025 – August 2025

Noida

- Fine-tuned Qwen 8B with Unsloth on the XLangAI SQL-NLU dataset, improving Text-to-SQL accuracy by 10%.
- Designed multi-agent workflows for a live low-code automation platform using LangChain and embeddings.
- Implemented LLM-powered SQL validation with guardrails, improving query correctness by 15-20% as measured by an LLM-as-judge evaluation framework, while reducing API calls through Redis caching.

Data Science Intern

SVAAS Inframax Solutions

January 2025 – May 2025

Noida

- Built an AI scheduling assistant using Mistral 7B, integrating the Google Calendar API for automated event management.
- Engineered an OCR and LLM summarization pipeline using PyTesseract for invoice scanning and ingestion.
- Deployed a YOLOv8 PPE detection system in PyTorch for real-time construction site safety compliance monitoring.

PROJECTS

SVAAS Employee Tracking System

Production HR & Operations Platform

- Built and deployed a production HR and operations platform (React/TypeScript, FastAPI, PostgreSQL/Supabase) serving 50-100 employees across two live portals (admin.svaasinfra.in, app.svaasinfra.in), covering attendance, payroll, tasks, leaves, expenses, procurement, and inventory.
- Implemented JWT authentication, refresh-token rotation, four-tier RBAC, and a payroll engine integrating GPS attendance, leave policies, and salary advances.
- Engineered a real-time inventory ledger with server-side validation to prevent over-issuance and automated Excel reporting across six modules.
- Developed an OpenAI chatbot with role-based tool access, WhatsApp/email notifications, and purchase/sales order tracking.

DataQuery

Text-to-SQL Visual Dashboard Platform

- Fine-tuned Qwen 8B with quantization on the Spider dataset (5,000+ SQL-NLU pairs), improving complex query accuracy by 10%.
- Built a Next.js and FastAPI application with multi-tenant architecture and RBAC.
- Automated dashboard creation using Chart.js for efficient data exploration.

Blood Report Analyser

Agentic Reports Hub

- Engineered an agentic medical report analysis pipeline using LangGraph's Send API for parallel panel extraction.
- Implemented a fully agentic ReAct pattern recognition engine (GPT-4o) that surfaces multi-marker clinical syndromes.
- Designed a clarification interrupt system for mid-graph human-in-the-loop pauses on unreadable reports.

SKILLS

LLM & Agentic Stack: LangChain, LangGraph, CrewAI, AutoGen, OpenAI API, Hugging Face, Unsloth, vLLM, Ollama, ChromaDB, Qdrant, Redis

Languages & Frameworks: Python, JavaScript, SQL, React, FastAPI, Flask, TensorFlow, PyTorch, Pandas, Scikit-learn

Cloud, DevOps & Tools: AWS (EC2, CloudWatch), Docker, Nginx, PostgreSQL, MySQL, MongoDB, Supabase, Git, Power BI

CERTIFICATIONS

- IBM RAG and Agentic AI - IBM
- Microsoft Certified: Azure AI Fundamentals
